12. (currently amended) A multilayer composite structure, comprising:

- a. a first foam layer comprising polyethylene homopolymer or copolymer;
- b. a second foam layer comprising polypropylene homopolymer or copolymer; and
- c. a coating disposed between and bonding said first and second foam layers together at a bond strength of at least about 4 lb $_f$ /inch, said coating having a thickness ranging from about 1 to about 6 mils and comprising ethylene/vinyl acetate copolymer, wherein

said polyethylene foam layer has a thickness ranging from about 1/16 to about 1 inch and said polypropylene foam has a thickness ranging from about 1 to about 4 inches, and

said composite structure is in the form of a flotation article.

## 13. (canceled)

- 14. (previously presented) The composite structure of claim 12, wherein said coating is substantially solventless.
- 15. (previously presented) The composite structure of claim 12, wherein said first foam layer comprises low density polyethylene.
- 16. (previously presented) The composite structure of claim 12, wherein said first foam layer has a density ranging from about 0.4 to about 15 pounds/ft<sup>3</sup>.
- 17. (previously presented) The composite structure of claim 12, wherein said second foam layer comprises polypropylene homopolymer.

said second foam layer has a density ranging from about 0.5 to about 10 pounds/ft <sup>3</sup> .
19. (previously presented) The composite structure of claim 12, wherein the bond strength between said first and second foam layers is at least about $4.5\ lb_f/inch$ .
